

## Used Forklift Parts

Used Parts for Forklifts - Inevitably, lift truck components would eventually wear out and need replacing. The choice of purchasing new parts can become pricey so one more idea is to purchase used components. This can save much money eventually. It is a great idea to acquire used lift truck components that have been remanufactured. These parts would guarantee that you are getting parts that would work for a long time and be productive.

Remanufacturing worn out or broken parts is a less expensive way overall than rebuilding. With rebuilding parts, just the components which are broken or worn out get replaced, which means that other wearable parts might break down soon after acquisition.

Remanufacturing on the other hand provides the best assurance for used components. Remanufactured parts are taken apart and cleaned and then all wearable pieces are changed. All wearable components are replaced regardless of age or wear which is one more reason why remanufactured components in general perform so much better. Whatever part within the part is new and this provides much longer life to the second-hand part. Based on the lift truck parts which are being redone, the cleaning process and the whole remanufacturing process will differ.

After complete disassembly, the engines are oven cleaned. Different parts of the engine like for example pistons, spark plugs, rings, filters, valves, and valve springs can be replaced during the remanufacture process. The engines are hot tested after reassembly to ensure that there are no noise, no oil pressure problems, no leaks or any vacuum.

Transmissions are oven cleaned, pressure washed, and disassembled. A complete inspection is done to check for any cracks. Seals, bearings and bushings are all replaced. Normally, the replacement components used on transmission parts meet OEM specifications.

A few components such as the alternator, the water pump, torque converters, steer axles and the starter can obtain longer serviceability after being reproduced and having all wearable components replaced. The electronic control in the electric forklift is maintained by the control card. This particular card can likewise be remanufactured with replacing all aged and worn out components. Not like other forklift components the control card could only have the worn and aged components replaced.

Remanufactured parts are thoroughly inspected upon reassembly to guarantee they are in top condition before being sold. It is vital when obtaining reproduced components to be sure they have undergone the proper testing and inspection procedures. On certain larger parts like for example engines, transmissions and steer axles, OEM specification replacement components should be used.

The forklift dealer can ensure that the parts they have remanufactured meet the OEM specifications. This will likewise guarantee the parts meet industry standards. Lots of details go into remanufacturing used parts. This attention to detail offers more serviceability out of remanufactured parts than the parts that were merely rebuilt.
